In this case, you can manage and control internet users who are using your WiFi to save your internet data, speeding up your WiFi speed, and at the same time, spoofing created for such purpose can be protected against attacks.NetCut Pro, a WiFi manager tool for Android users from which you can view devices connected to your WiFi and disconnect them from the network. You can easily download this application directly from developer site Arcai.com for free with essential features for Android users. Its professional version-Netcut Pro is a membership-based software with unlimited features that can be purchased at a reasonable price. Let's go ahead to find out more about the exciting features of this app with our full review on Netcut Pro.As to cut net The name of the app, NetCut helps any other users from the Internet completely slow down or reduce By downloading via a PC or Android gadgets. NetCut also helps users to see the IP address and name of any device connected to your WiFi as long as you use this application. For such features, you can see that your neighbor is shutting down your internet and stopping using it. On the other hand, the app can be used as a tool to detect any attacker using your network. Below are the detailed features of Netcut Pro that you want to know more: To get started, you'll be able to see visitors to your network system using Netcut Pro, including unknown guests who have been on your WiFi. Such users have a full description of the historical record of who/when/name/brand using chart reports by brand along with your WiFi and duration of login and out. The application will display a lot of information such as IP, device name, time and area in the Out and Records tab that you can see visitor users in the professional version. You will be able to easily give users the name to remember by putting pressure on any network user for input name for the user in the pop-up window. With the professional version of Netcut you will be able to control the Internet speed of network users. Equally important, you will also get the chance to set online or offline status to any gadgets associated with your WiFi such as phone/Xbox, PS3, PS4, softphone etc. And if you want, you can block internet access to any of those specific devices using this app. More interestingly, you can also lock your WiFi in the Customer tab to prevent any new users or devices from accessing the Internet, which said, you can block all devices. Similarly, it can resume proper internet access by just one click to release the lock. Then, you will also experience another powerful feature of the software to schedule offline, that is, set the start and finishing time that the user can use the Internet. Such a function may be useful for parents or administrators to control the internet's use of members like children or members of the organization, respectively. NetCut can scan networks when you think there are users on a network, but you're not aware of it. Thus, if a local area tries to cheat against you through the network, you will be able to locate it directly from netcut. To control the network more vigorously, tasks have been performed to slow down or rapidly scan all network users in the NetCuts Pro version. Slow mode is applied to a system with high data traffic, while quick ways are used when you want to scan at the final speed. When you launch the app, it automatically scans the network that provides you with a list of connected users' information; Thus, you can use your system Can identify the type of. In this step, you can enable defender option in the background by turning it on to search for a web host with the attacker: yes to blocking them from internet access for any IP or gadget. You can choose to blacklist users you don't want to include in the network. For Therefore, you can move between three columns: Blocked (Blacklist), Trusted (Whitelist), and other software by drag-and-drop actions in the Client tab. On top of that, you'll be able to randomly change the mac address of the network which creates an extra layer of security for the basic configurations of the PC version or Netcut for Android gadgets under spoofing attacks by Netcut Pro, you're able to control all connected users within the LAN in the Options tab. NetCut Pro Edition allows you to trim the effect gateway and user to cut the network between two network users within the LAN. This only accomplished by installing one user as a gateway and cutting other users, such as Apple TV, Xiaomi Box, Google TV, etc. to disable screencasting such as features. The good news for those who are interested in this powerful network management tool is that there can be a free netcut version. If you're interested in its higher version – Netcut Pro version with more functions, the subscription fee is only \$2.99 per month or \$29.9 per year and can be used between Android and Windows. Somehow, the price is affordable for users who want to get system monitoring that shields against the spoofing attack of any malicious actor, and at the same time, manages the use of other network users. As an easy-to-use application for network users to manage, NetCut Pro APK is undoubtedly a useful type of software for users to secure their internet usage and save their data. Data.
